                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              OM protein -
Pred. No. is the number of results predicted by chance to have score greater than or equal to the score of the result being put and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seg length: 0 seg length: 2000000000

wood pulp :
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               novel EGIII-like cellulase of Rhodothermus marinus. It was deduced from a gene sequence isolated from genomic DNA using PCR primers (see AAX59180-91) based on conserved motifs (see AAY06325-29) of Trichoderma reesel EGIII cellulase and related enzymes. PCR has been used to identify novel EGIII-like enzymes, including the present protein, from bacterial and fungal sources (see AAY06331-70). The sequence shows homology to T. reesel EGIII (see AAY06330). Also provided by the invention are vectors, host cells and methods for the recombinant production of such enzymes, which can be used in the treatment of cellulose-containing textiles, as feed additives, in the treatment of wood pulp, in the reduction of biomass to glucose, in the stone washing of indigo dyed denim, or as laundry detergent components (all claimed).

```
The present sequence is a cellulase related to endoglucanase III (EGIII) from Trichoderma reesei. EGIII-like genes were isolated from genomic DNA libraries constructed from various microorganisms by PCR. The isolated genes showed significant homology to EGIII from T. reesei. Certain subsitution and deletion mutations have been incorporated into EGIII and EGIII-like cellulases to produce variant enzymes with improved stability, e.g. increased resistance to temperature stress. The mutants may be used in textile and wood pulp treatment, as a feed additive, and for reducing biomass to glucose. They are also useful for stonewashing or indigo dyed denim and as an agent in laundry and dish detergents.
                                                                                                                                                                                                                                                                                                                                        specified positions in the wild

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents an endoglucanase III (EGIII)-like cellulase. The cellulase has homology to the Trichoderma reesei EGIII protein. The variant cellulases have improved temperature stability, and improved surfactant stability. The variant cellulases and compositions containing them are used in textile processing or cleaning, e.g. stonewashing of indigo dyed denim, and modifying the texture, feel or appearance of cellulose containing fabrics (e.g. improving fabric smoothness or removing pills and fibrils). The compositions may also be used for the removal of immature or dead cotton from cellulosic fibres or fabric, which can cause uneven dying. The cellulase may also be used in a detergent composition for washing laundry and dishes and in the treatment of animal feed, wood pulp, paper, non-animal foods and grains. The enzymes may also be used in the reduction of biomass to glucose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel variant endoglucanase III-like cellulases with improved surfactant stability and resistance to temperature stress, useful for textile processing or cleaning, treating wood pulp, food and grain, and reducing biomass to glucose

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present polypeptide represents a partial sequence of a novel EGIII-like cellulase of Rhodothermus marinus. It was deduced from a partial gene sequence isolated from genomic DNA using PCR primers (see AAX59180-91) based on conserved motifs (see AAX06325-29) of Trichoderma reesei EGIII cellulase and related enzymes. PCR has been used to identify novel EGIII-like enzymes, including the present polypeptide, from bacterial and fungal sources (see AAX06331-70). Also provided by the invention are vectors, host cells and methods for the recombinant production of such enzymes, which can be used in the treatment of cellulose-containing textiles, as feed additives, in the treatment of vood pulp, in the reduction of biomass to glucose, in the stone washing of indigo dyed denim, or as laundry detergent components (all claimed).

The cellulase composition, as an additive for animal feed and for the treatment of textiles or pulp and paper. The DNA encoding the cellulase can be used to identify homologous cellulases and for recombinant production of cellulases. The present sequence represents the protein sequence of a cell signal sequence and cellulase liAG8 fusion sequence contained in the expression cassette consisting of the GI promoter, cell signal sequence, cellulase liAG8 and GI terminator

The present polypeptide represents a full-length sequence of a novel EGIII-like cellulase of Streptomyces sp. 11AG8. It was deduced from a gene sequence isolated from genomic DNA using PCR primers (see AAX59180-91) based on conserved motifs (see AAY06325-29) of Trichoderma reesei EGIII cellulase and related enzymes. PCR has been used to identify novel EGIII-like enzymes, including the present protein, from bacterial and fungal sources (see AAY06331-70). The sequence shows homology to T. reesei EGIII (see AAY06331). Also provided by the invention are vectors, host cells and methods for the recombinant production of such enzymes, which can be used in the treatment of cellulose-containing textiles, as feed additives, in the treatment of wood pulp, in the radiction of biomass to glucose, in the stone washing of indigo dyed denim, or as laundry detergent components (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The present sequence is a cellulase related to endoglucanase III (EGIII) from Trichoderma reesei. EGIII-like genes were isolated from genomic DNA libraries constructed from various microorganisms by PCR. The isolated genes showed significant homology to EGIII from T. reesei. Certain subsitution and deletion mutations have been incorporated into EGIII and EGIII-like cellulases to produce variant enzymes with improved stability, e.g. increased resistance to temperature stress. The mutants may be used in textile and wood pulp treatment, as a feed additive, and for reducing biomass to glucose. They are also useful for stonewashing or indigo dyed
                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel endoglucanase III or endoglucanase III-like cellulase useful for treating textiles and wood pulp comprises a substitution or deletion at specified positions in the wild form of endoglucanase III \, -
                                                                         Sequence
                                                                                                                   in textile and wood pulp treatment, as a feed additive, ar
biomass to glucose. They are also useful for stonewashing
denim and as an agent in laundry and dish detergents.
                                                                                                                                                                                                                                                                                                                                                                                                Example 1; Fig 3; 52pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and improved surfactant stability. The variant cellulases and compositions containing them are used in textile processing or cleaning, e.g. stonewashing of indigo dyed denim, and modifying the texture, feel or appearance of cellulose containing fabrics (e.g. improving fabric smoothness or removing pills and fibrils). The compositions may also be used for the removal of immature or dead cotton from cellulosic fibres or fabric, which can cause uneven dying. The cellulase may also be used in a detergent composition for washing laundry and dishes and in the treatment of animal feed, wood pulp, paper, non-animal foods and grains. The enzymes may also be used in the reduction of biomass to glucose.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents an endoglucanase III (EGIII)-like cellulase. The cellulase has homology to the Trichoderma reesei EGII protein. The variant cellulases have improved temperature stability, and improved surfactant stability. The variant collulation is a sequence of the collulation of

The DNA encoding the cellulase can be used to identify homologous cellulases and for recombinant production of cellulases. The present sequence represents cellulase from Actinomycetes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The present polypeptide represents a full-length sequence of a covel EGIII-like cellulase of Streptomyces lividans (CelB). It was cleduced from a gene sequence isolated from genomic DNA using PCR primers (see AAX59180-91) based on conserved motifs (see AAY06325-29) cof Trichoderma reesel EGIII cellulase and related enzymes. PCR has been used to identify novel EGIII-like enzymes, including the present protein, from bacterial and fungal sources (see AAY06331-70). The sequence shows homology to T. reesei EGIII (see AAY06330). Also provided by the invention are vectors, host cells and methods correct the recombinant production of such enzymes, which can be used in the treatment of cellulose-containing textiles, as feed additives, in the treatment of wood pulp, in the reduction of colonass to glucose, in the stone washing of indigo dyed denim, or colonass to glucose, in the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing of indigo dyed denim, or constituted the stone washing dyed denim, or constituted the stone stone washing dyed denim, or constituted the stone washing dyed d

EGIII-like genes were isolated from genomic DNA libraries constructed from various microorganisms by PCR. The isolated genes showed significant homology to EGIII from T. reesei. Certain subsitution and deletion mutations have been incorporated into EGIII and EGIII-like cellulases to produce variant enzymes with improved stability, e.g. increased resistance to temperature stress. The mutants may be used in textile and wood pulp treatment, as a feed additive, and for reducing biomass to glucose. They are also useful for stonewashing or indigo dyed denim and as an agent in laundry and dish detergents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel endoglucanase III or endoglucanase III-like cellulase useful for treating textiles and wood pulp comprises a substitution or deletion specified positions in the wild form of endoglucanase III -

The cellulase has homology to the Trichodorma reesei EGIII protein. The variant cellulases have improved temperature stability, and improved surfactant stability. The variant cellulases and compositions containing them are used in textile processing or cleaning, e.g. stonewashing of indigo dyed denim, and modifying the texture, feel or appearance of cellulose containing fabrics (e.g. improving fabric smoothness or removing pills and fibrils). The compositions may also be used for the removal of immature or dead cotton from cellulosic fibres or fabric, which can cause uneven dying. The cellulase may also be used in a detergent composition for washing laundry and dishes and in the treatment of animal feed, wood pulp, paper, non-animal foods and grains. The enzymes may also be used in the reduction of biomass to glucose.

                                                                                                                                                                                                                                                                                                                                                                                                                                        This polypeptide is an alkaline xyloglucanase obtained from Bacillus licheniformis ATCC 14580. The enzyme shows optimal activity at 60 deg C, and rectains 50% of its activity affer 20 min at 70 deg. The optimum pH for activity is 5.54, with 32% relative at 70 deg. The optimum pH for activity is 5.54, with 32% relative activity retained at pH 4.59, and 45% at pH 8.49. The keat is 16.5/sec on xyloglucan at pH 7.5, Km 1.1 g/l. The ratio of maximum xyloglucanase activity to maximum activity on CM-cellulose is at cleast 5:1. An isolated polynucleotide (see AAX06949) encoding the xyloglucanase can be utilised in the production of recombinant enzyme. Xyloglucanase preparations are useful for improving the properties of cellulosic fibres, yarn, (non)woven fabric, and for rating hemp, jute, flax and linen fibres (claimed). They can also detergent compositions (claimed). The enzyme preparations exhibit high xyloglucanase activity at alkaline pH without essentially cattacking cellulose or cellulose derivatives.

                                                                                                                                                                                                                                                                                                                                                                                                                                              The present polypeptide represents a full-length sequence of a covel ECIII-like cellulase of Erwinia carotovora. It was deduced from a gene sequence isolated from genomic DNA using PCR primers (see AAX59180-91) based on conserved motifs (see AAY06325-29) cof Trichoderma reesei ECIII cellulase and related enzymes. PCR has been used to identify novel ECIII-like enzymes, including the present protein, from bacterial and fungal sources (see AAY06331-70). The sequence shows homology to T. reesei ECIII (see AAY06330). Also provided by the invention are vectors, host cells and methods for the recombinant production of such enzymes, which can be used in the treatment of cellulase-containing textiles, as feed additives, in the treatment of wood pulp, in the reduction of biomass to glucose, in the stone washing of indigo dyed denim, or as laundry detergent components (all claimed).

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

A; Description: Sulfolobus solfatar
A; Reference number: A99139
A; Accession: G90291
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-332 <KUR>
A; Cross-references: GB:AE006641; N
C; Genetics:
A; Gene: SS01354
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      endoglucanase precursor [imported] - Sulfolobus solfataricus (;Species: Sulfolobus solfataricus C;Species: Sulfolobus solfataricus C;Date: 24-May-2001 #sequence_revision 24-May-2001. #text_change 24-May-2001 C;Accession: 690360 R;She, O.; Singh, R.K.; Confalonieri, F.; Zivanovic, Y.; Allard, G.; Awayez, M.J.; Jong, I.; Jeffries, A.C.; Kozera, C.J.; Medina, N.; Peng, X.; Thi-Ngoc, H.P.; Redd arrett, R.A.; Ragan, M.A.; Sensen, C.W.; Van der Oost, J. submitted to GenBank, April 2001 A;Description: Sulfolobus solfataricus complete genome.
